

WebExplorer
**A TOOL FOR ONTOLOGY-BASED
INFORMATION EXPLORATION**

**Feza Baskaya, Anne Keskimaa,
Jaana Kekäläinen, Kalervo Järvelin**
University of Tampere, Finland

Background

- Vast online information environments
 - billions of digital **documents**
 - many different natural **languages**
 - **distributed** document production and publication: no generally agreed rules
 - general **lack of control** in the process
 - much **spam** and other unwanted material

Background (2)

Web searchers encounter following problems

- Old problem - vocabulary mismatch
 - hard to guess the best search keys; leads to loss of search effectiveness
 - especially in foreign languages
 - hard to know word forms (tokens / lemmas)
- Other problems – depending on one's search environment
 - collection dependency, metadata dependency
 - engine and query language dependency

Background (3)

to annotate
or
not to annotate

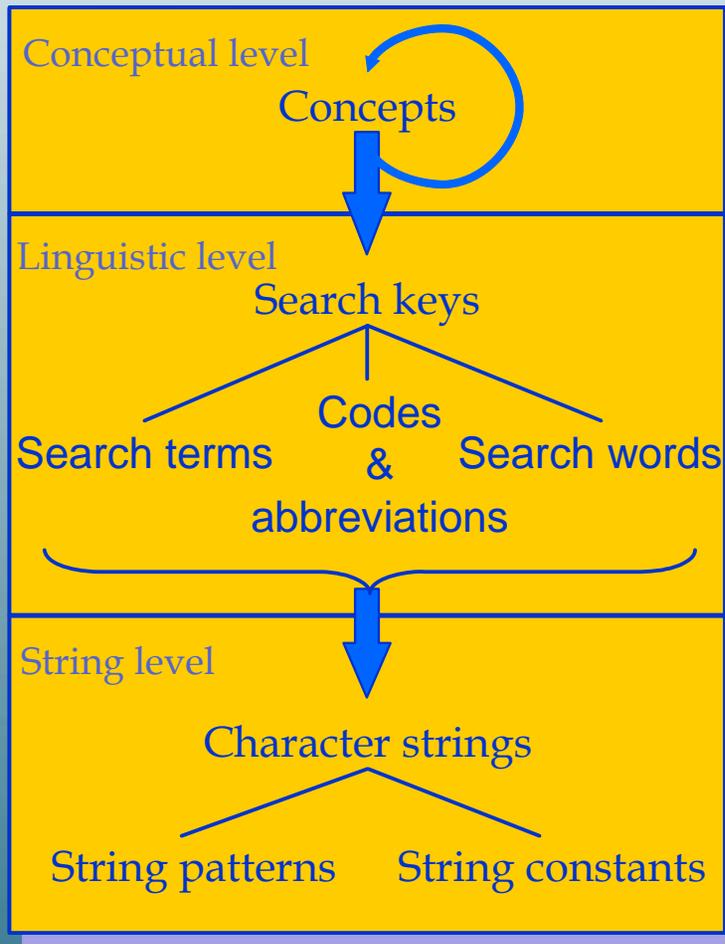

Design of WebExplorer

Requirements on the Ontology

- **Personal**
- **Small-scale**
- **Mapping**
- **Multilingual**
- **Editable**

Ontologies of WebExplorer based on

Three-level architecture

- Forest industry

- forest industry
- paper industry
- saw mill
- ...

- pl(saw, mill)
- al(industry)
- pl(paperi, tehdas)

Design of WebExplorer

Additional functionalities are required for information exploration:

- **Keyword search**
- **Query-biased summaries**
- **Classification**
- **Clustering**
- **Bookmarking**
- **Smooth integration of functions**

WebExplorer Interface

The screenshot displays the 'Ontology based Web Explorer' interface. It is divided into several functional areas:

- Search Functions:** Includes a search bar with 'Add keywords' and a 'Search' button. Below it, there are buttons for 'Search', 'Summary', 'Cluster', 'Classify', 'Bookmarks', and 'RSS'. A 'Search in Ontology:' field with an 'Options' button is also present.
- Options:** A section for 'Search Engine Parameters' with dropdown menus for 'Search Engine' (Google), 'Database' (WEB), 'Liberality' (Liberal), 'Query lang' (Italian), and 'Expansion level' (10). It also includes an 'Ontology Selection' dropdown set to 'Inter. relation' and a 'Query Restriction' section with a 'Deselect all' button.
- Ontology:** A tree view showing a hierarchy starting with 'JRC' and 'INTERNATIONAL RELATIONS', including sub-categories like 'cooperation policy', 'defence', 'international affairs', and 'international agreement'.
- Search Results:** The right side shows a list of search results for the query '(((accordo AND multilaterale) OR (trattato AND multilaterale)))'. The first result is 'ADR - List of Multilateral Agreements', followed by 'Istituto Federale della Proprietà Intellettuale', 'GLOSSARIO', and 'Accordo Multilaterale Italia'. A yellow summary box is overlaid on the second result, containing text about bilateral subscriptions and international agreements.

The WebExplorer user interface

WebExplorer Interface (2)

Search | Summary | Cluster | Classify | Bookmark | RSS

Query for Summary:

[1.0 the government's digital britain report has proposed that every citizen with a fixed line phone will pay 50p per month to pay for the roll out of faster next generation networks .](#)

Search | Summary | Cluster | Classify | Bookmark | RSS

Select a cluster option and click on cluster tab after selection in order to get new cluster tree.

- All documents on the first page (titel,snipped)
- Selected documents (content)

Euroopan Parlamentti
Pahin
(Other)
EP
Murrosten
Buzek Tapasi Tukholmassa
Analysoi
Afrikan
Kiinan Hallituksen
EU

WebExplorer Interface (3)

Search Summary Cluster Classify Bookmark RSS

Ontologies Finance (Eng)

- JRC
 - FINANCE
 - budget
 - budget financing
 - budgetary expenditure
 - budgetary procedure
 - implementation of the budget
 - credit and financial institutions
 - financing and investment
 - free movement of capital
 - insurance
 - monetary economics
 - monetary relations
 - prices
 - public finance and budget policy
 - taxation

WebExplorer System Architecture

WebExplorer System Architecture Diagram

Formative Evaluation

To test the feasibility of WebExplorer

	Group 1	Group 2
Ontology IR	+2	+1
CL-IR	+2	+1.5
Summarization	0	+1
Classification	+0.5	--
Bookmarking	+1.5	0.5
RSS Feeds	+0.5	--

Median values of the groups' opinions

Scale: -2 to +2

-2:No benefit at all

-1:Only little benefit

0:I can't say

+1:some benefit

+2:much benefit

School grade (4-10)
for WebExplorer:7

Conclusion

- WebExplorer is an answer to problems in semantic information access
 - **light-weight** disposable **ontologies** for direct content access
 - **independencies** of:
 - **collections** (partially), indexing ways,
 - availability of metadata / **annotations**
 - changes of needs, **variability** of "world models"
 - **search engines, query languages**
 - vocabulary variation and **natural languages**
 - annotation - media analysis
 - a compromise different from semantic annotation or library indexing with control at the user end
 - costs and benefits distributed in a new way

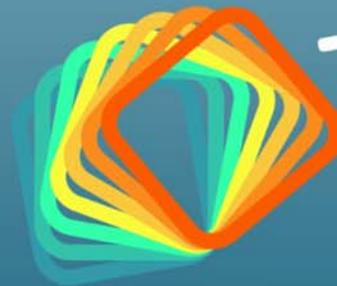

Conclusion

Document Analysis functions offer

- Online query biased **summarization** of individual documents and document sets
- **Clustering** of documents
- Ontology based cross-lingual **classification**
- **Bookmark** management
- Displaying search results on **map** and **timeline**

Thank you!
