# Ontology of Historical Keywords

# Holistic Collaborative Finnish Ontology KOKO

Aligning ontologies:  
General upper ontology YSO  
+ domain-specific ontologies

Intersecting ontologies	Number of equivalent concepts
YSO + TAO	1990
YSO + MAO	2330
YSO + VALO	950
MAO + TAO	1190

[Hyvönen et al., ESWC 2009]

# Examples

- Professions
- Archeological concepts
- Object types, materials etc.
- Mappings with international thesauri

# Ontology of Historical Times and Periods

# Component 2: Metadata Models

## Object and document centric

- Traditional approach in museums
  - Dublin Core

## Event-centric

- Object = sum of the events related to it (= biography)
- New standards for data harmonization and enriching
  - CIDOC CRM (museums) + IFLA LRM (libraries)

## Process-centric?

- Next level after events

# Example

## Document/Object-centric model

**Type:** Image  
**Title:** Allied Leaders at Yalta 1945  
**Date:** 1945  
**Publisher:** United Press International (UPI)  
**Source:** The Bettmann Archive  
**Copyright:** Corbis  
**References:** Churchill, Roosevelt, Stalin

- Events
  - Acricola and other timelines of Finnish history
- Museums and Libraries
  - Finnish National Gallery
  - Finna, Fennica
  - BookSampo, CultureSampo
- Media
  - YLE and KAVA archives
- Legislation
  - Semantic Finlex

# How to Deploy the Infrastructure for the Clients to Use?

# How to publish Linked Data? 5-star Linked Data model

- ★ Make data available on the Web in whatever format under an open license.
- ★★ Make data available as structured data (e.g., Excel instead of an image scan of a table).
- ★★★ Use non-proprietary formats (e.g., CSV instead of Excel format).
- ★★★★ Use URIs to denote things, so that people can point at your data.
- ★★★★★ Link your data to other data to provide context.

(Tim Berners-Lee)  
<http://5stardata.info>

# Our "7-star" model and [LDF.fi](http://LDF.fi) data hotel

## Goals: enhance re-usability and data quality

### 7-star Linked Data Service

However, in our opinion, providing 5-star Linked Data is just the beginning. To actually make use of the datasets, consumers need more support in getting to know and access them, as well as a better grasp of their quality and provenance. To this end, we extend the model with two additional stars:

- ★★★★★★ Provide your data with a schema and documentation so that people can *understand and re-use* your data easily.
- ★★★★★★ Validate your data and denote its provenance so that people can *trust the quality* of your data.

This added support should come with as little extra work as possible to the data publisher. Our hypothesis is that a lot of this can be done automatically, basing on the Linked Data core. A data publisher needs only to provide their data in the RDF format, and the LDF.fi portal will do the rest automatically. See the [overview paper](#) (in ESWC 2014 Proceedings, Springer-Verlag) for some more details about the underlying ideas.

Burj Al Arab

# Why LDF.fi?

## Living Laboratory for publishing Linked Open Data

- Same idea as in **ontology services** (e.g., ONKI <http://onki.fi> )
- But for **data** and **schemas**

## Linked Data Finland

### Living Laboratory Data Service for the Semantic Web

This site is the Living Laboratory of the [Linked Data Finland](#) research initiative, conducted by the [Semantic Computing Research Group](#) at [Aalto University](#) in collaboration with University of Helsinki and a large consortium of Finnish public organizations and companies.

Our goal is to make life easier for both publishers as well as consumers of structured data on the Web. We base our work on the [Linked Data](#) paradigm and stack of standards, which combines an expressive, semantic data model ([RDF](#)) with standardized access mechanisms ([SPARQL](#) and [live HTTP URIs](#)).

#### 5-star Linked Data

The baseline of our work is the [5-star Linked Data model](#), proposed [originally](#) by Tim Berners-Lee.

- ★ Make data available on the Web in whatever format.
- ★★ Make data available as structured data (e.g., Excel instead of an image scan of a table).
- ★★★ Use non-proprietary formats (e.g., CSV instead of Excel format).
- ★★★★ Use URIs to denote things, so that people can point at your data.
- ★★★★★ Link your data to other data to provide context.

#### 7-star Linked Data Service

However, in our opinion, providing 5-star Linked Data is just the beginning. To actually make use of the datasets, consumers need more support in getting to know and access them, as well as a better grasp of their quality and provenance. To this end, we extend the model with two additional stars:

- ★★★★★★ Provide your data with a schema and documentation so that people can *understand and re-use* your data easily.
- ★★★★★★★ Validate your data and denote its provenance so that people can *trust the quality* of your data.

This added support should come with as little *extra* work as possible to the data publisher. Our hypothesis is that a lot of this can be done automatically, basing on the Linked Data core. A data publisher needs only to provide

[Applications](#)

[Your Data?](#)

This dataset includes data regarding Finnish legislation and court decisions. The RDF data has been converted using data from the Finlex service; we call the new dataset Semantic Finlex. Special thanks to the Ministry of Justice, Edita Publishing Ltd. and Talentum Corp.

### License

[CC BY 4.0](#) 

See possible graph-specific licenses below.

### Detailed Dataset Contents

**Finnish Legislation (URI: <http://ldf.fi/finlex/laki/>)**

( [Browse data](#) / [Download](#) )

Finnish acts and decrees.

Example resource URI: <http://ldf.fi/finlex/laki/statute-sd18890039>

**Finnish Court Decisions (URI: <http://ldf.fi/finlex/oikeus/>)**

( [Browse data](#) / [Download](#) )

Decisions of the Supreme Court and the Supreme Administrative Court.

Example resource URI: <http://ldf.fi/finlex/oikeus/courtKKO>

### Schemas Used

Following schemas (vocabularies) are used in the datasets above:

- Schema: <http://purl.org/finlex/schema/laki/>
- Schema: <http://purl.org/finlex/schema/oikeus/>

### Vocabulary Usage Analysis and Quality Issues

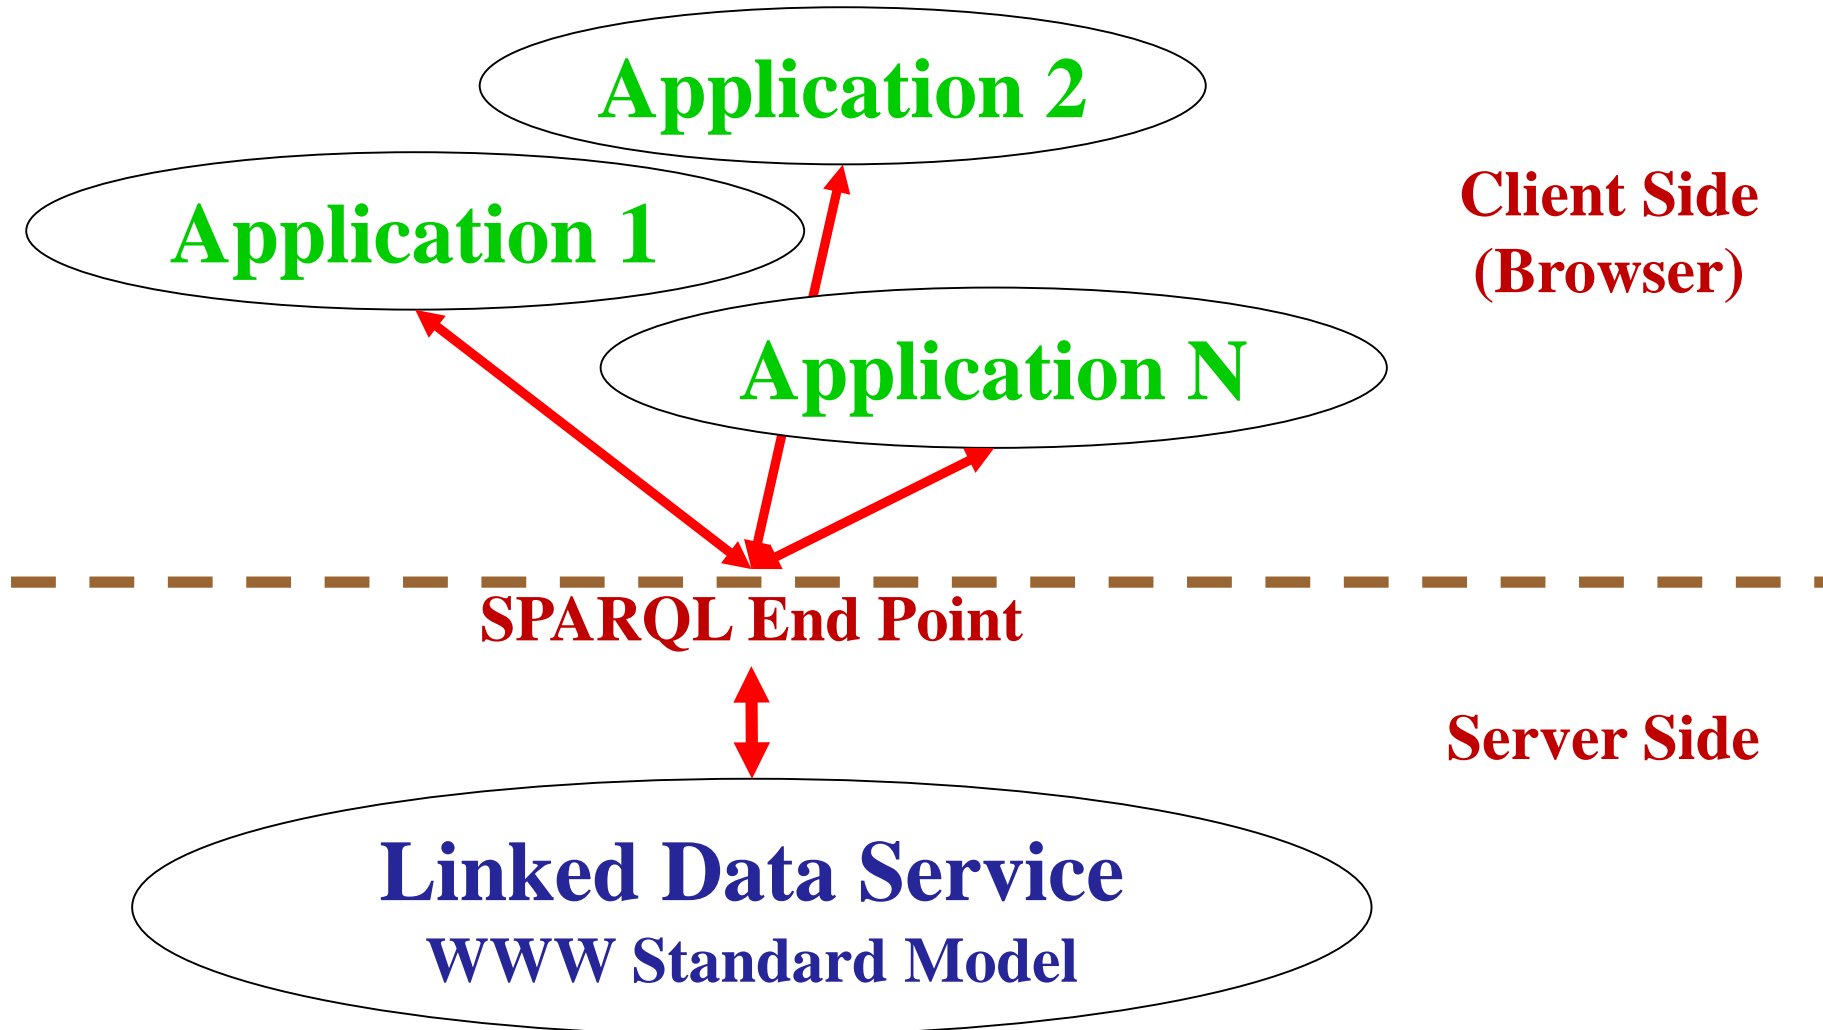

Following analyses tell what schemas (vocabularies) are used in the dataset graphs and how they have been used. Issues on data quality are pointed out.
